Objective

Software Engineer, Graduate Program at Cisco with hands-on experience building and shipping a production AI compliance pipeline. Skilled in Python automation, LLM integration, and RAG pipelines — with direct experience integrating GPT, GitHub Copilot, and LangChain into real workflows. Seeking AI and software engineering roles where I can build and experiment with emerging AI tools.

Technical Skills

Languages: Python, Java, JavaScript, Typescript, SQL

Backend: Node.js, FastAPI, REST API

Databases: PostgreSQL, ChromaDB

AI & LLMs: LangChain, RAG, MCP Server, GPT Integration, GitHub Copilot, Prompt Engineering

Testing: Playwright, Unit Testing, Jenkins

Tools & Practices: Git, GitHub, JIRA

Experience

Software Engineer — Cisco Systems (Graduate Program) Oct 2025 – Present

CUSP Application Testing

- Expanded the test suite from 100 → 200+ cases using Playwright + TypeScript, pushing coverage to 95% across all major application functions.
- Ran scripts in headed mode to visually catch UI and backend mismatches, then reviewed final test code with the team and confirmed pipeline compatibility through Jenkins.

PSB Security Compliance Pipeline

- Built an AI compliance pipeline that fetches security policy requirements, scans a 168,000-file codebase, and auto-creates JIRA tickets — cutting a 2-year manual process to under 2 hours.
- Designed a 12-phase pipeline where only 4 phases call an LLM — built a Probe Compiler that pre-filters files into GOOD/NOISY/DEAD buckets, eliminating 70% of irrelevant files before any LLM touches the codebase.
- Solved hallucination in gap detection by replacing a single-prompt approach with consensus voting — 3 parallel LLM calls per evidence bucket, scored against 5-run history to suppress false positives.
- Wired 3 MCP servers (JIRA, GitHub Copilot, OpenAI Codex) into the pipeline so confirmed gaps automatically become tickets with owner assignments and code-level fix suggestions.

Projects

AI-Powered Legal Query System — Python, Django, AWS Jan 2024 - Feb 2024

- Built a secure web app for police officers to input case descriptions and get suggested IPC and CrPC sections automatically — reducing manual section lookup and false accusations.
- Personally built the entire frontend and authentication system using HTML, CSS, and Django — restricted access to verified police credentials only.
- Implemented Hindi document support using Tesseract OCR and spaCy NLP to extract and translate uploaded complaint letters — improving system usability for Rajasthan Police use case.

Education

B.E(Information Technology) — PSNA College of Engineering and Technology 2021 - 2025

- CGPA: 8.1 / 10

Achievements

- Finalist — Rajasthan National Level Police Hackathon 2024 (selected among top teams nationwide)
- AWS Cloud Practitioner – Amazon Web Services
- Claude Code in Action — Anthropic
- SQL with Relational Database – IBM
